

Recording an iChat Session

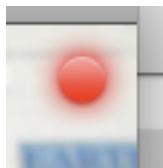

1. Open iChat and select the person you want to converse with. Select the camera button for video chat.

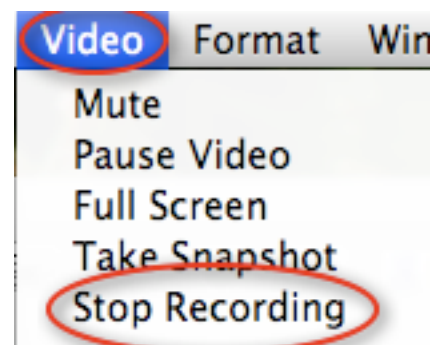

2. After they have accepted the invitation, go to the top of your screen and select Video and then Record Chat. The person on the other end must ok the recording session.

A red recording light will show in the upper right-hand corner of the video screen to show that the conversation is being recorded.

3. To stop recording, go back up to Video and select Stop Recording from the drop down menu.

The iChat session will automatically download into iTunes. It will be stored under Playlists (on the left side), and under iChat Sessions.
